

6 Ways GPS Vehicle Tracking Will Keep Your Teen Drivers Safe This Summer

Concerned about your teenage driver this summer? DriveOK vehicle tracking units will make their time behind the wheel much safer. Here are six ways how.

1. Speed alerts

Log onto DriveOK tracking software and choose a speed you want to be notified if your teen exceeds a set speed (70 MPH, for example). Then, each time your vehicle is tracked going 71 MPH or faster, you'll receive an alert via text message and/or e-mail.

Don't take our word for it, read an email we received from a parent:

"Vehiclepath helped me "train" my daughter to drive safely. As soon as my daughter obtained her driver's license, we installed a GPS tracking unit in our car and set a geofence and a speed limit. At first we did not tell her that it was in the car."

"Wow 100 mph on an expressway! We were frightened to death. We confronted her and then told her if she exceeded the speed limit by more than 5mph we would stop her insurance and take the car away."

2. Geofence alerts

Set up to six "geographic boundaries" around addresses ("home" or "school", for example) and be alerted via text and/or e-mail when your teen drives into or outside of those boundaries. You are out of town and you left instructions that your car is not to be driven unless there is an emergency. Just got a text message on Saturday night that your car has exited a geofence? Was your car stolen, was there an emergency at home or is your teen driver out for a drive? Again, for safety's sake, this alert really comes in handy.

3. Theft recovery

Has this happened to you? You are out at the mall and come back and your car is gone. With DriveOK you can login to your account via the Internet or the telephone and know where your car is. A quick call to the police and you can get your car back. Customers have reported having their vehicle recovered in as quickly as 40 minutes.

4. Starter Disable prevents unauthorized driving (optional feature)

Enable or disable your vehicle's starter from your account. Don't want your teenager driving your car? Don't want your teen driving when you are out of town? Live in a bad neighborhood and don't want someone stealing your car?

Disable your vehicle's starter with one mouse click and that car isn't going anywhere.

5. Quickly give directions to your lost teen

It's not safe for your teen to be lost on the road. Who do you want giving them directions? Preferably, you! Using our software, reliable Google Maps help you quickly locate your teen to help them find their way.

6. Quickly find/send help if your teen's vehicle is broken down

Your teen driver is 2 hours late and they aren't answering their phone. Login to your account and see where they are so you can send assistance. They could be broken down or need your help.

In addition to these six benefits, GPS tracking units give you significant insurance discounts. Considering how expensive it is insure teens and how much gas costs these days, every discount you can get helps!
