JETT-Track Service Fleet Tracking Customer Case Study

Company: Awnclean USA, Inc.

Company profile: Florida-based awning and pressure cleaning company – installed JETT-Track GPS service fleet tracking units on their cleaning trucks.

Awnclean's problems: Drivers speeding and driving recklessly, plus high maintenance and fuel costs.

Why they chose JETT-Track:

Awnclean told us they chose JETT-Track to help them cut costs and increase worker safety. Their drivers' average speed dropped 10-15 MPH once they knew they were being monitored. This has saved them fuel, limited the risk of accidents and reduced truck repair and maintenance costs. Awnclean also uses JETT-Track to get turn-by-turn directions for a job or to help a lost driver find their way.

Customer's comments:

"We installed the JETT-Track GPS service fleet tracking system last year to monitor our drivers, make sure they are not speeding and remain safe while working," said Paul Diehl, owner of Awnclean. "Many of our jobs are in the evening (a long way from our office) and drivers are towing a lot of weight with their trucks. An added benefit is we know when their workday starts, when they go to lunch and when a job has been completed. This will save us on payroll and paperwork costs."

JETT-Track service vehicle tracking uses Google Maps to help dispatchers navigate and find the best routes. JETT-Track has also added the traffic feature from Google, which allows customers to see traffic conditions across the country in real-time.

"We had a situation where a driver had an on the job injury and we needed to get him to the hospital," Diehl said. "We were able to login to JETT-Track, find the nearest hospital and tell them how to get there quickly."
